Superior protection

The new fluoride varnish system Fluor Protector S from Ivoclar Vivadent offers professional protection of teeth against hypersensitivity, caries and erosion.

The innovative varnish technology of Fluor Protector S is based on decades of experience in the development and manufacturing of dental varnishes by Ivoclar Vivadent and was developed in close cooperation with dentists and their teams. The varnish system contains fluoride in a homogeneous solution, which ensures immediate availability of fluoride. The varnish directly and effectively covers the dental enamel and releases fluoride within a very short time. Furthermore, a high-yield depot is formed from which calcium in addition to fluoride is released over an extended period of time. Fluor Protector S has a mild taste and smell and is therefore especially suitable for children and sensitive patients.

New delivery forms

The innovative multi-dose tube allows Fluor Protector S to be dispensed in the desired quantity quickly, hygienically and economically. Alternatively, the product is supplied in free-standing, pre-dispensed single-dose units.
