More cost effective

BioUniversal KFG is a new universal alloy from Ivoclar Vivadent. The alloy is distinguished by a golden yellow hue and high-expansion characteristics.

BioUniversal KFG is especially designed for the milling and telescopic crown technique. It is also suitable for veneering applications involving special low-fusing ceramics. Given its low density, the alloy is particularly economical to use. Its biocompatibility has been assessed and certified. The range of indications include onlays, three-quarter crowns, telescope crowns, conus crowns, posts, short-span bridges and long-span bridges.

Selecting an appropriate alloy

The Alloy Configurator provides instant information on the indications, composition and colour of BioUniversal KFG together with information on all the other alloys from Ivoclar Vivadent. This web-based database facilitates the selection of a suitable alloy. In addition, it features an alloy cost comparison calculator and a comprehensive set of information for use. The Alloy Configurator can be downloaded from the Ivoclar Vivadent website. The tool is now also available as an app for iPhone and iPad from the Apple App Store.
