

Press release

Bonding regardless of the light conditions

The light- and dual-curing adhesive system from Ivoclar Vivadent

Schaan, 08 January 2010 – **Excite F and Excite F DSC are fluoride-releasing total etch adhesives from Ivoclar Vivadent. The choice of the product to use depends on whether or not the curing light will be able to cure the adhesive.**

The light-curing adhesive Excite F is used in clinical cases where the exposure to the curing light is ensured, for instance in direct restorative procedures.

In addition to being supplied in bottles and single-dose vessels, Excite F is now also available in the new VivaPen delivery form. The amount of adhesive contained in a VivaPen is sufficient for approximately 120 applications. The integrated fill-level indicator allows reliable control of the amount of Excite F that remains in the VivaPen.

Impeded accessibility of the cavity

If the cavity is not accessible with the curing light or if chemically curing composites are used, the dual-curing Excite F DSC (Dual cure Single Component) material is indicated.

Excite F DSC is available in hygienic single-dose vessels in two sizes: “Regular” for normal preparations and “Small” for micro-cavities and endodontic applications.

Excite F and Excite F DSC will be available worldwide in January 2010.
