

Press Release

Small stick, strong adhesion

OptraStick facilitates the work with delicate materials

Schaan, September 1st, 2008 – **Ivoclar Vivadent will launch OptraStick, the successor product of the application instrument VivaStick, in September. This instrument allows dentists and dental technicians easy handling of indirect restorations.**

It is very difficult to pick up, position and precisely place expensive restoration materials. With the OptraStick, dentists and dental technicians can easily handle indirect restorations and small parts.

OptraStick is an application instrument made of plastic that features a flexible adhesive tip, which enables dentists and dental technicians to easily take hold of and precisely place indirect restorations made of various materials, such as ceramic inlays and onlays as well as IPS Empress or IPS e.max veneers.

Using the OptraStick will greatly facilitate the course of clinical treatment.
