Superior clear protective varnishes
that fit all your needs

Varnishes that fit your patients needs.

Cervitec® Plus Chlorhexidine and Thymol Varnish

Cervitec® Plus is an innovative protective varnish from Ivoclar Vivadent containing the combination of 1% chlorhexidine and 1% thymol for clinically proven, long lasting, advanced protection. Cervitec Plus helps ensure the longevity of quality restorative work and provides protection against exposed and sensitive tooth surfaces for high caries-risk patients. Cervitec Plus is moisture tolerant during application and the active ingredients promote the formation of a coating or barrier to protect at-risk tooth surfaces.

- Implants
- Restorations
- Extensive Crown and Bridge
- Orthodontic Brackets
- Exposed Cervicals
- Fissures
- Grooves

Features and Benefits

- ✓ Clinically proven for long lasting advanced protection
- ✓ Clear varnish provides optimal esthetics
- ✓ Quick and easy application saves time
- ✓ Evenly distributed application
- ✓ Combined benefits of Thymol and Chlorhexidine in a varnish application
- ✓ Can be applied directly to temporaries

Cervitec Plus is best used for patients that need advanced protection. We recommend Cervitec Plus be applied on patients with high risk of developing caries and bacteria.

- 604661AL Cervitec Plus Multi Dose Refill/2x7g 2x Cervitec Plus Tube, 7g 100 Vivadent Applicators

Cervitec® F Fluoride, Chlorhexidine, and CPC Varnish

Cervitec® F is an universal protective varnish that combines fluoride, cetylpyridinium chloride (CPC), and chlorhexidine diacetate in one simple, easy to apply, product. The varnish creates a mechanical barrier to protect exposed dentin and root cervicals from dentinal hypersensitivity. Cervitec F is more than your typical fluoride varnish because it provides protection to your teeth and surrounding areas with all the benefits of fluoride, CPC, and chlorhexidine (without the negative side-effects of chlorhexidine gluconate) in one varnish suitable for all ages.

- Open Dentin Tubules
- Exposed Root Surfaces
- Hypersensitive Cervicals
- Porous Tooth Surfaces
- Fillings and Crowns

Features and Benefits

- ✓ Applied like a fluoride varnish for protection of tooth surfaces and surrounding at-risk areas
- ✓ Unique formulation with optimum flow and wetting properties
- ✓ No refrigeration needed, application at room temperature
- ✓ Readily flows into proximal areas and porous tooth surfaces
- ✓ Multiple protection in one simple application
- ✓ Offers benefits of fluoride, cetylpyridinium chloride (CPC), and chlorhexidine diacetate in a clear varnish

Cervitec F is best for patients that have a moderate chance of developing caries and bacteria.
