IPS e.max: Certified CAD/CAM milling machines ensure high-quality restorations

Ivoclar Vivadent makes close collaboration with manufacturers of CAD/CAM technology a priority.

Ever more CAD/CAM systems are launched on the market. Certified and authorised production systems provide reliability and safety during the manufacturing process and create the best possible conditions to enable the fabrication of high-quality restorations.

Long-standing collaboration with innovative partners from the CAD/CAM hardware and software sector has been at the heart of Ivoclar Vivadent's success as a supplier of CAD/CAM materials. These partners have made a powerful contribution to the success of IPS e.max CAD, IPS Empress CAD and Telio CAD. The collaboration with Sirona, Planmeca, KaVo and Wieland has enabled Ivoclar Vivadent to offer joint customers integrated and validated manufacturing procedures to allow maximum quality standards for the fabrication of high-precision restorations. The aim of our company is to help dental professionals to fulfil the expectations of their patients at all times.

For further information on authorized CAD/CAM manufacturers, please go to www.ivoclarvivadent.com.

IPS e.max®, *IPS Empress®* and *Telio®* are registered trademarks of Ivoclar Vivadent AG.
