Ortho Care Program
Oral Health Management
during and after orthodontic treatment

Synchronized solutions for a bright smile
Strong and healthy teeth and healthy gums. This is the goal to which orthodontists and their teams aspire and it is the wish of orthodontic patients.

Oral Health Management in orthodontic patients

Orthodontic patients are faced with many challenges: Brackets and bands promote the growth of the bacterial biofilm. What is more, the complex structures are difficult to clean. As a result, white spot lesions may develop and the gums can become inflamed. Therefore, selective Oral Health Management solutions for in-office and at-home use are required for all the different orthodontic treatment phases. The ultimate goal is not only to have properly aligned teeth, but also good looking and healthy teeth.

Ortho Care Program

The Ortho Care Program from Ivoclar Vivadent offers coordinated product systems for the placement of brackets and for professional oral health care during and after the orthodontic treatment. The products are suitable for use in orthodontic patients due to their special ingredients, as well as their favourable properties related to flow, wetting and adhesion. Furthermore, the products are easy to apply and have mild flavours. Clinical experience and the results of international studies confirm the effectiveness of these products in this target group.
Ivoclar Vivadent offers synchronized solutions for a bright smile.

- Healthy mouth
- Healthy teeth
- Healthy gums

Contents:

4 OptraGate®
   For a full view

5 Plaque Test
   Focus on biofilm

8 Proxyl®
   Removal of bacterial biofilm

10 Fluor Protector
   Superior protection against caries and erosion

12 Cervitec®
   Individualized protection for at-risk areas

14 Heliosit® Orthodontic and Bluephase® Style
   Fast placement of brackets

15 VivaStyle® Paint On Plus
   Serious whitening
A full view of the working area saves treatment time and heightens the safety of orthodontic procedures. The latex-free lip and cheek retractor OptraGate® retracts the lips and cheeks around the entire circumference of the mouth.

OptraGate® provides unhindered access to the oral cavity and enables dental professionals to work efficiently, knowing that their patients are comfortable during the following procedures:

- dental examination
- bonding and removal of brackets and bands
- application of Plaque Test
- professional cleaning and polishing of the teeth
- application of protective varnishes
- tooth whitening

This saves everyone involved precious time.

The oral cavity and the teeth are easy to reach. As a result, the bonding and removal of brackets and bands proceeds more efficiently.
Plaque Test

Focus on biofilm

Bacterial biofilm promotes the development of white spot lesions and gingivitis. Therefore, the desired outcome of the orthodontic treatment is compromised.

Problem areas: Brackets and bands

Plaque tends to accumulate in the areas around brackets and bands, which are difficult to clean. At the same time, excellent oral hygiene is indispensable to the success of the orthodontic treatment. As a result, patients need good advice.

Plaque Test – revealing the biofilm

Plaque Test is used to selectively colour bacterial biofilm and make it visible. The fluorescent pigment does not react with the teeth, gums and orthodontic appliances. Only the plaque-coated areas glow under the light of a curing unit, for example, Bluephase® Style from Ivoclar Vivadent.

Special tip

- Bacterial biofilms can be selectively and gently removed with Proxyl® pastes, which are specially formulated for professional tooth cleaning and polishing. The OptraGate® lip and cheek retractor facilitates access to tooth surfaces.

Benefits for the dental team

- Comprehensive diagnostics
- Individualized recalls
- Risk-based treatment

Benefits for orthodontic patients

- Personalized attention
- Early detection
- Long-term preservation of teeth

The scientific basis

- Caries and periodontal disease are closely associated with bacterial biofilm (Marsh & Martin 2003).

Advantages

- Selective application
- Only the biofilm glows
- Fluoresces under any curing light

Benefits

- No unsightly staining of the tongue, gums and mucous membrane
- Clear examination results
- Easy to integrate into routine procedures
In order to prevent white spot lesions and gingivitis, the teeth and appliances are systematically and professionally cleaned in the dental practice on a regular basis during orthodontic treatment. Apart from the oral health benefits, professional tooth cleaning promotes “white” and “pink” esthetics. The teeth and gums look good. Even after the brackets and bands are removed.
Smooth surfaces prevent the formation of bacterial biofilms

Apart from hard and healthy dental enamel, significantly less resistant dentin, filling materials and the transition to the bonding material may have to be cleaned. The use of harsh agents must be avoided, as they roughen the surfaces. And, rough surfaces promote the growth of bacterial biofilm.

Gentle cleaning

Since orthodontic patients need to have their teeth cleaned professionally on a regular basis, this procedure should be as effective and gentle as possible. The fine pumice-free Proxyt paste is suitable for this purpose. It is applied with a soft rubber cup or brush. The polishing paste produces a natural-looking gloss and smooth surfaces.

Special tip

- Bacterial biofilms can be made visible with the fluorescent Plaque Test.

Benefits for the dental team

- Long-term gentle cleaning
- Well-being of patients
- Effective prevention of white spot lesions and gingivitis

Benefits for orthodontic patients

- Well-being
- Perceptibly smooth surfaces
- Long-term beautiful teeth

The scientific basis

- Professional tooth cleaning is recommended as a supplement to at-home cleaning measures during orthodontic treatment (Lux & Zingler 2013).

Prox®t—the prophy pastes

Fluor Protector

Superior protection against white spot lesions

The fluoride provided by toothpaste is often not enough for orthodontic patients. In these cases, additional fluoride treatment is necessary. The professional application of a fluoride varnish, for example, Fluor Protector or Fluor Protector S, is recommended for this purpose.

Comprehensive protection
Fluoride varnishes allow the teeth to be professionally protected against the following conditions:
- hypersensitivity
- caries
- erosion

For individual needs
Fluor Protector and Fluor Protector S differ in their composition, fluoride concentration and delivery form. The varnishes are designed to fulfil different treatment needs.

The effective combination
Patients who wear brackets have to be treated with special dental care products for in-office and at-home use. Fluor Protector Gel, for example, contains fluoride in addition to calcium, phosphate and xylitol. The intensive care gel supplements the effect of the professionally applied protective varnishes. It strengthens the teeth and protects them against acid attacks.

Protection of problem areas
The low viscosity of Fluor Protector and Fluor Protector S ensures good flow and wetting properties. The varnishes spread easily and readily flow into complex surface structures. Problem areas such as
- surfaces around brackets and bands
- exposed cervicals
- fissures
- proximal surfaces
- filling and crown margins
- porous tooth surfaces
receive the required amount of fluoride and the protection it offers. Numerous international clinical studies and decades of practical experience confirm the effectiveness and the successful results of fluoride varnishes in orthodontic patients.

1 Highly viscous fluoride varnishes sit on the tooth surface.
2 The low-viscosity fluoride varnish Fluor Protector S spreads easily and readily penetrates into porous surfaces.
Special tip

The chlorhexidine-containing Cervitec® Plus varnish reduces the high concentration of mutans streptococci in susceptible orthodontic patients. This enhances the effectiveness of fluoride.

Benefits for the dental team

- Highly effective fluoride varnishes and intensive care gel
- Solutions for individual needs
- Fast treatment

Benefits for orthodontic patients

- Fast, comfortable treatment
- Clinically proven method
- Long-term beautiful teeth

The scientific basis

- The routine application of a fluoride varnish during the treatment with fixed orthodontic appliances can reduce the development of white spot lesions in the vicinity of brackets (Stecksén-Blicks et al. 2007).
Cervitec®

Individualized protection for at-risk areas

Standard oral hygiene measures and professional tooth cleaning and fluoridation are not adequate to protect the teeth from harm in orthodontic patients with high germ counts. In these cases, it is necessary to selectively reduce the number of relevant germs.

Cervitec® gives microorganisms a hard time

A high number of certain germs in the mouth compromises the health of the teeth, gums and mucous membrane and therefore the envisaged outcome of the orthodontic treatment.

The active ingredient chlorhexidine can minimize this risk. The chlorhexidine-containing Cervitec products offer individualized in-office and at-home solutions, in terms of the active-ingredient concentration, the delivery form and the application method:

- Cervitec F, the protective varnish
- Cervitec Gel, the oral care gel
- Cervitec Liquid, the mouth rinse

Cervitec® F for targeted protection

Cervitec® Gel, the oral care gel
Cervitec F – multiple protection

Special tip

- Orthodontic patients can enhance the effect of the professional treatment with Cervitec F by using Cervitec Gel at home.

Benefits for the dental team

- Customized solutions for germ control
- Clinically proven preparations
- Easy to integrate into the treatment regime

Benefits for orthodontic patients

- Mild taste of all Cervitec products
- Products recommended by dental professionals
- Painless treatment

The scientific basis

- A treatment protocol is recommended which will help to remineralize the dental enamel during orthodontic treatment and control the dynamics of cariogenic germs at the same time (Kneist et al. 2008).

Cervitec® Gel is easy to distribute.
Brackets should adhere well to the teeth. Furthermore, they should be easy to remove after the treatment. Heliosit® Orthodontic is available for bonding purposes together with the Bluephase® Style curing light.

**Heliosit Orthodontic for a strong bond**

The single-component, composite-based Heliosit Orthodontic allows a fast and easy bonding of brackets made of metal or ceramic. The stable consistency facilitates the application and positioning of the brackets. The Bluephase Style curing light quickly cures the bonding material.

**Heliosit Orthodontic – the bonding material for brackets**

<table>

_Bonding of brackets with Heliosit Orthodontic_  

*Pictures: Dr. T. Repetto-Bauckhage, Ivoclar Vivadent AG, Liechtenstein*
**Bluephase Style for every use**

Due to the specially developed Polywave® LED with a broadband spectrum of 385 to 515 nm, Bluephase Style is capable of polymerizing all current photoinitiators and dental materials. The shortened light guide can be rotated by 360 degrees enabling easy access to all tooth surfaces with brackets.

**Bluephase Style – the curing light**

<table>
<thead>
<tr>
<th>Advantages</th>
<th>Benefits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Polywave® LED</td>
<td>Can be used with every bonding material</td>
</tr>
<tr>
<td>High-performance LED (1,100 mW/cm²)</td>
<td>Short curing time</td>
</tr>
<tr>
<td>Rotatable light guide</td>
<td>Easy polymerization for bonding brackets</td>
</tr>
</tbody>
</table>

The parallel light guide generates a homogeneous light scattering, resulting in a consistent polymerization. Bluephase Style can be held like a pen or like a pistol. Given the light’s low weight and balanced weight distribution, the strain exerted on the hand and arm is reduced, regardless of the size of the hand.

**Special tip**

- The enamel areas adjacent to the brackets can be protected with the fluoride-containing varnish Fluor Protector S.

**Benefits for the dental team**

- Fast bonding
- High degree of reliability and safety
- Coordinated system

**Benefits for orthodontic patients**

- Good adhesion of brackets
- Proven method
- Enhanced esthetics

**The scientific basis**

- Study results have shown that LED devices with a high light intensity are suitable for bonding brackets, even at an exposure time of 10 seconds (Palomares et al. 2008).
Many adult patients like to have their teeth whitened after undergoing orthodontic treatment. VivaStyle® Paint On Plus is available for lightening stained natural teeth.

**Professional decisions**

Various treatment options involving the innovative tooth whitener in varnish form are available in accordance with the diagnosis and the individual patient needs:

- in the dental office or at home

**VivaStyle Paint On Plus**

Intensive treatments can be undertaken in the dental practice to produce fast whitening results. For this purpose, VivaStyle Paint On Plus is applied several times in succession during one appointment (Mata & Marques 2006).

**Advantages**

- Varnish system containing 6% hydrogen peroxide
- Fast release of active ingredients
- Provitamin D-panthenol

**Benefits**

- Controlled application and action on the right spot
- Only ten minutes per application
- Conditioning of the gingiva

**Serious whitening**

VivaStyle® Paint On Plus

For orthodontic treatment, Ivoclar Vivadent offers the Ortho Care Program. It will allow you to fulfil your own personal standards as well as the individual requirements of your patients in terms of function and esthetics. During orthodontic treatment, the teeth and mouth require professional Oral Health Management solutions. Ivoclar Vivadent is there to assist you. The Ortho Care products for prevention, treatment, bonding and care enable you to enhance the services of your practice in anticipation of the future.
