Stratos range expanded

New accessories now offer even more individualized setting options for Stratos articulators.

The name Stratos stands for precision articulators that offer convincing quality and ergonomic design. Ivoclar Vivadent supplies a range of equipment that is closely tailored to the needs of the customers. New accessories now provide additional scope for individualization.

A customizable anterior guidance plate and a purpose-designed curved incisal pin have been added to the range to serve as ideal accessories for the individually adjustable Stratos 300 articulator. Both products are also available for all the other articulators of the Stratos range.

Individual anterior guidance plate

The customizable anterior guidance plate allows the angle values to be individually set as required. The lateral anterior guidance angle can be continuously adjusted from 0 to 70 degrees. The product is distinguished by high precision. Locking screws allow the movable components to be reliably secured in position. In addition, the metal surfaces of the anterior guidance plate feature a high-quality anodized finish.

Curved incisal pin

The curved incisal pin is utilized in conjunction with the adjustable anterior guidance plate and allows a continuous raising or lowering of the articulator to the required height. The height is displayed on a millimetre scale. Considerably more accurately fitting and customized restorations are the outcome. A setting pin allows the individual components of the entire system to be accurately aligned to one another. As an additional advantage, subsequent adjustments can be performed directly on site.

Stratos® is a registered trademark of Ivoclar Vivadent AG.
