Cervitec® F
The protective varnish with combined effect

Multiple protection in one step
In certain situations, it is of utmost importance to work swiftly. The advanced protective varnish Cervitec® F offers a quick means of protecting tooth surfaces in people who have a high susceptibility to caries.
Only one step:
Fluoridation and germ control

The Cervitec F varnish system contains fluoride, chlorhexidine and cetylpyridinium chloride (CPC).
CPC helps to prevent the build-up of plaque and the occurrence of gingival inflammation.
In addition, it enhances the effect of chlorhexidine.

This innovative combination of ingredients enables one-step fluoridation and germ control.

Multiple protection

Cervitec F is recommended as a basic protective measure in individuals

- who are susceptible to caries
- with hypersensitive teeth

Easy and fast application

All the ingredients of Cervitec F are completely dissolved. As a result, the varnish is immediately ready for use and can be applied in controlled amounts. Its relatively high moisture tolerance allows the product to be applied with ease.

The solution in specially challenging situations

Cervitec F is suitable for people of all ages, from small children to seniors. The varnish system offers a fast solution in the case of...

- poor compliance
- limited oral hygiene ability
- prosthetic restorations
- fixed orthodontic appliances

The straightforward application protocol allows the varnish to be used in field conditions, for example, in homes for the retired or for people with special needs.
Cervitec® F

Multiple protection in one step

Basic protection in high-risk cases

Cervitec F is designed to help prevent caries in high risk cases. The liquid varnish readily flows into intricate surface structures. As a result, the following areas receive the protection they need:

- open dentin tubules
- exposed root surfaces
- erupting teeth
- fissures
- proximal surfaces
- areas around brackets and bands
- areas along the margins of crowns and bridges

Quality assurance

Cervitec F also helps to protect high-quality tooth replacements.

Natural teeth that serve as supporting or retaining elements or antagonists, for example, receive comprehensive protection.
Cervitec F – The protective varnish

**Features**
- 1,400 ppm fluoride plus 0.3% chlorhexidine plus 0.5% CPC
- Cetylpyridinium chloride (CPC)
- High moisture tolerance
- Optimum flow and wetting properties
- Mild taste

**Benefits**
- Fluoridation and antibacterial effect in one
- Helps to prevent plaque and gingival inflammation
- Easy application even in field conditions
- Targeted treatment of hard-to-reach susceptible areas
- High level of acceptance among the persons treated

**Important for patients**
- Mild taste
- Fast application
- All-round basic protection

**Your benefits**
- Combined protection in high-risk cases
- Fast application protocol
- Efficiency

- Fluoride
- Chlorhexidine
- Cetylpyridinium chloride

Cervitec® Gel
Professional oral care in the dental office and at home

At-home use
Individuals who are susceptible to caries, gingivitis, periodontitis, peri-implantitis or denture stomatitis can reinforce the treatment received in the dental office by applying Cervitec® Gel at home.

Targeted protection
Cervitec Gel protects the gums, peri-implant soft tissue, the oral mucous membrane and teeth. Therefore, it helps to maintain the high quality of any existing restorations, prosthetic work and implants. Apart from chlorhexidine, Cervitec Gel contains fluoride, which is responsible for strengthening natural teeth and reducing the risk of caries.

Cervitec® F forms a part of the “Fixed Prosthetics” product category. The products of this category cover the procedure involved in the fabrication of fixed prosthetic restorations – from temporization to restoration care. The products are optimally coordinated with each other and enable successful processing and application.

**IPS e.max® System**
all ceramic – all you need

The comprehensive solution covering all indications
- Highly esthetic, high-strength materials for the press and CAD/CAM technique
- Unique lithium disilicate (LS2) and zirconium oxide (ZrO2) ceramics for restorations ranging from thin veneers to long-span bridges
- Flexibility of cementation: adhesive, self-adhesive and conventional

**Variolink® Esthetic**
The esthetic luting composite

The luting composite for exceptional esthetics and user-friendly processing...
- Balanced and concise Effect shade system
- Excellent shade stability due to amine-free composition
- Easy, controlled excess removal
