New CD-ROM for users of Stratos articulators

The new CD-ROM “Precision, Function, Design” from Ivoclar Vivadent presents the functionality of the masticatory system and dental articulators in easy-to-follow multimedia form.

High-quality dental restorations are not only characterized by their high esthetics and the high quality of materials used, but also by appropriate function. Therefore, Ivoclar Vivadent recommends that precision articulators be used in the fabrication of tooth restorations. In order to provide the best possible support to users of the Stratos articulators 100, 200 and 300, the company has launched a new CD-ROM entitled “Precision, Function, Design“. This CD-ROM contains 20 short videos that provide visual and audible information on the setting and movement options provided by the Stratos articulators. The CD-ROM gives users a comprehensive overview of the different uses of Stratos articulators and the accessories available. In addition it provides information about model transfer, registration and function. Moreover, the CD-ROM also offers multimedia guidance in selecting an appropriate articulator.

The CD-ROM “Precision, Function, Design”, which is a very useful tool for experts as well as for trainees and students, will be available via specialized dealers.
