

Press Release for chairside users

Gloss from a can

Even glaze with the IPS Empress Universal Glaze Spray

Schaan, 19 June 2008 – **Time is Money – this is particularly true for the chairside fabrication of ceramic restorations. For that reason, Ivoclar Vivadent launches a glaze spray which is quick to handle and also excellently suitable to glaze IPS Empress CAD restorations.**

The ready-for-use glaze spray is quickly and easily sprayed onto fully anatomical, characterized IPS Empress CAD restorations and fired in the Programat CS ceramic furnace. The composition of the glaze material corresponds to that of the glaze paste - only the form of application is new.

The constant consistency is another advantage. The spray can be applied on leucite glass-ceramics in very thin layers. Hence the surface structure is maintained and an even gloss is created.

The IPS Empress Universal Glaze Spray is available from June 2008.

For the specific application on (blue) IPS e.max CAD restorations of lithium disilicate, the IPS e.max CAD Crystall/Glaze Spray has been developed.
